## New Luna Cables Orange Moving Coil Step-Up Transformer

- selectable hi/low ratio for wider compatibility
- switch for selecting mono or stereo output
- resonance-optimized diecast chassis
- handmade in Canada

Through the manipulation of impedance, the Luna Cables Orange Step-Up transformer will add gain without noise or grain. When compared to active head amps, it delivers lower distortion, particularly in higher frequencies, allowing for a richer and more refined sound. Greater resolution allows for a more elaborate soundstage, with accurate placement of instruments not only left-to-right, but front-to-back as well. The step-up transformer is a necessary tool in the quest for the best sound using a moving coil cartridge.
